Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem Statement

Organizations that handle service requests manually or through disconnected tools struggle to manage them reliably. The main problems are:

- Requests are submitted through different channels, so details are often incomplete or entered incorrectly.
- Users get no acknowledgement or status update, so they do not know whether their request was received or is being handled.
- Request records are scattered and hard to trace, making follow-up and order history unreliable.
- Service providers receive unclear instructions, and inventory is not updated in step with fulfilled requests.

Proposed Solution

The Online Service Request Management System provides one platform where users submit requests, which are validated and stored in a central datastore. Each request is passed to a service provider for fulfillment, the record is updated with the provider's status response, and inventory is adjusted. The user then receives a confirmation and status update. This keeps data accurate, traceable, and visible to everyone involved.

Data Flow Diagram

The Data Flow Diagram (DFD) shows how data moves through the system between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., User, Service Provider).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Request).
Rectangle (solid fill, no number)	Data Store	A place where data is held for later use (e.g., Request Datastore, Inventory).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Data Flow Diagram: Online Service Request Management System

Data Flow Summary

No.	From	To	Data Passed
1	User	1 Request Handling	Service request

2	1 Request Handling	User	Acknowledgement
3	1 Request Handling	Request Datastore	Validated request and customer information
4	Request Datastore	2 Fulfillment	Request details
5	2 Fulfillment	Service Provider	Service order details
6	Service Provider	2 Fulfillment	Status response
7	2 Fulfillment	Request Datastore	Update record
8	Request Datastore	3 Notification	Order history
9	3 Notification	Inventory	Type and quantity
10	3 Notification	User	Confirmation and status update
