Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	3 Marks

Customer Problem Statement

Define the customer's problem clearly by describing who the customer is, what they are trying to do, what stands in their way, why it happens, and how it makes them feel.

Problem Statement	PS-1	PS-2	PS-3
I am <i>Who is the customer?</i>	A customer using the service across multiple channels (web, app, support).	A customer who raises requests or issues and expects them to be resolved.	A customer who has contacted the service more than once for the same matter.
I'm trying to <i>What do they want to achieve?</i>	Complete my request quickly without repeating myself.	Track the status of my request from start to finish.	Get a clear answer and a resolution time from the support team.
But <i>What stops them?</i>	I have to re-enter my details at every step and channel.	I cannot see who owns my request or what is happening to it.	I get different answers from different people and no follow-up.
Because <i>What is the root cause?</i>	The touchpoints are disconnected and share no customer history.	The journey stages and ownership are not mapped or visible.	There is no single view of the customer's experience to find pain points.
Which makes me feel <i>What is the emotional impact?</i>	Frustrated and impatient.	Anxious and uninformed.	Ignored and distrustful of the service.
