

No. of Functional Features Included in the Solution

Date: 01 October 2026

Team ID:6ab2251f18c49545982255a8

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks:5 Marks

Functional Features Overview:

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	0	Not applicable / Flow-based solution

2	Backend / Logic	4	Flow triggers, conditions, record processing, error handling
---	-----------------	---	--

This document lists all the functional features included in the Flow Designer project solution. Each feature is described with its purpose, implementation status, and contribution to the overall solution.

S.No	Feature Name	Feature Description	Module / Component	Status (Done / In Progress / Pending)	Marks	Contribution
1	Flow Trigger	Starts the workflow automatically when the defined record or event occurs.	Flow Trigger	Done		Initiates the automated process.
2	Data Collection	Retrieves the required record and data for processing.	Data / Record Action	Done		Provides input data to the workflow.
3	Condition Handling	Checks predefined conditions and determines the appropriate workflow path.	Flow Logic	Done		Controls decisionmaking in the flow.
4	Record Processing	Creates, updates, or manages records based on the configured requirements.	Flow Actions	Done		Automates the required business operation.
5	Notification	Sends notifications to the required users or teams after specified flow events.	Notification Action	Done		Keeps users informed about workflow results.
6	Error Handling	Handles flow errors and unsuccessful operations using appropriate logic.	Error Handling	In Progress		Improves reliability of the automation.
7	Reusable Flow Components	Uses reusable subflows or actions for common workflow operations.	Subflow / Action	In Progress		Reduces repeated logic and improves reusability.
8	Testing & Verification	Tests the workflow with different conditions and verifies expected results.	Testing	In Progress		Ensures functional correctness before use.

Feature Summary:

Metric	Count / Value
Total Features Planned	8
Total Features Implemented	5
Core / Must-Have Features	5
Additional / Nice-to-Have Features	3
Features Tested & Verified	5

Feature Category Breakdown:

3	Database / Storage	1	Record retrieval and record updates
4	API / Integration	1	Flow actions and system integrations
5	Security / Authentication	1	User/role-based execution and access controls

Problem Statement:

Manual execution of repetitive business processes can lead to delays, inconsistent processing, and increased effort. This project uses ServiceNow Flow Designer to implement functional features that automate triggers, data processing, conditions, record actions, notifications, and workflow verification in a structured and reusable manner.
