Project Name	Script_ Controlled ACL _ Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

PERSONA NAME (Role/User Type)	SAYS	THINKS	DOES	FEELS
ServiceNow System Administrator / Security Lead	"Standard role-based ACLs are too broad; we need to dynamically restrict access based on specific field values like Confidentiality or State."	Needs a secure, maintainable scripted ACL solution that evaluates conditions dynamically without impacting platform performance.	Writes server-side GlideRecord ACL scripts, tests access rights across different roles/field states, and audits access logs.	Anxious about potential security breaches and data exposure, but confident once scripted ACL rules validate access correctly.
