Team ID	6ab2256ffc67a5bc022256a7
Project Name	Script_ Controlled ACL _ Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Access Attempt / Draft State	Stage 2: Field Value Change / In Review	Stage 3: Restrict & Approval / Closed State
Actions <i>What does the customer do?</i>	• Navigates to record form in ServiceNow. • Inputs preliminary record data and status field set to 'Draft'. • Attempts standard read/write operations.	• Updates field value to 'In Review' or 'Confidential'. • Triggers server-side Scripted ACL evaluation dynamically. • Attempts unauthorized edits on restricted fields.	• Attempts direct URL access or list view read access. • Receives security access denied notification. • Requests elevated role override or state progression.
Touchpoint <i>What part of the service do they interact with?</i>	• ServiceNow Form View & UI Fields. • Standard Role Authorization Engine. • Draft State Data Entry Fields.	• Scripted Access Control List (ACL) Rules. • Server-Side Evaluation Scripts. • Record Status / Category Field Dropdown.	• Security Exception / Access Denied Banner. • System Log Entries for ACL evaluation. • Role Assignment / Approval Workflow.
Customer Thought <i>What is the customer thinking?</i>	• 'I need to enter basic project details cleanly.' • 'Will I be able to edit this record later?' • 'Are my permissions standard for draft files?'	• 'Why are certain fields suddenly locked or read-only?' • 'Did changing the status update my permissions?' • 'Is the script verifying my current user role correctly?'	• 'The system properly protected confidential data.' • 'How do I request temporary access if needed?' • 'The restricted view ensures compliance.'
Customer Feeling <i>What is the customer feeling?</i>	• Confident and comfortable with standard entry. • Neutral regarding standard layout. • Clear on initial workflow.	• Slightly confused if access is restricted unexpectedly. • Cautious about modifying sensitive status values. • Reassured by proactive security rules.	• Secure knowing data integrity is enforced. • Satisfied with automated role-based restriction. • Relieved that data leakage is prevented.
Process Ownership <i>Who is in the lead on this?</i>	• System User / Requestor • ServiceNow Platform Administrator • IT Service Desk Support	• ServiceNow ACL Developer / Security Engineer • System Administrator • Process Owner	• Information Security Team • Platform Admin • Compliance Auditor
Opportunities <i>How can we improve this stage?</i>	• Provide clear inline helper text for status field transitions. • Display active user role context on form header. • Automate pre-validation tooltips.	• Optimize server-side script efficiency to reduce latency. • Add user-friendly modal explaining specific field locks. • Include fallback UI policies for instant feedback.	• Implement automated access request workflows. • Enhance ACL debug logs for administrators. • Provide dynamic list view filtering alongside record ACLs.
