| Team ID       | 6ab2256ffc67a5bc022256a7                                             |
| Project Name  | Script_ Controlled ACL _ Restrict Record Access Based on Field Value |
| Maximum Marks | 2 Marks                                                              |

## Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

| Symbol                            | Name            | Description                                                                                                                     |
|-----------------------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------|
| Oval / Rounded shape              | External Entity | A person, organization, or system outside the project that sends or receives data (e.g., End User, ServiceNow Admin).           |
| Rectangle with numbered header    | Process         | An activity that transforms incoming data into outgoing data (e.g., Record Request Validation, Scripted ACL Evaluation Engine). |
| Rectangle (solid fill, no number) | Data Store      | A place where data is held for later use (e.g., Record Database, ACL Rules & Props, Security Audit Logs).                       |
| Labeled arrow                     | Data Flow       | The movement of data between entities, processes, and data stores, labeled with what data is being passed.                      |

## Data Flow Diagram Visual

The diagram below illustrates how external entities, server-side scripted ACL evaluation processes, and data stores interact dynamically.
