

Technology Stack

Date	05-10-2026
Team ID	6ab2256ffc67a5bc022256a7
Project Name	Script_ Controlled ACL _ Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	ServiceNow Next Experience UI / Service Portal (AngularJS, HTML5, CSS3)	Provides dynamic form rendering, real-time field-level visual feedback (e.g., read-only indicators), and responsive user experience within the Now Platform.
2	Backend / Server-Side (e.g., Node.js, Python/Django, Java)	ServiceNow Server-Side JavaScript (Rhino / ECMAScript 2021 Engine)	Executes server-side Access Control List (ACL) scripts dynamically to validate field values and enforce security policies before rendering or updating records.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	ServiceNow Relational Database (MariaDB / MySQL Engine)	Provides high-performance relational storage for record tables, field state metadata, system properties, and security evaluation log entries.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	ServiceNow Cloud Infrastructure (SaaS / PaaS Platform)	Ensures high availability, automatic scaling, strict tenant isolation, and seamless enterprise cloud deployment for security rules.
5	Version Control & CI/CD (e.g., GitHub, GitLab, Jenkins)	ServiceNow Studio, Git Integration & Instance Scan	Enables version-controlled source management, automated security rule static analysis, and seamless cross-instance deployment across Dev/Test/Prod.
6	Third-Party APIs / Other Tools (e.g., Stripe, Twilio, Google Maps)	ServiceNow Table REST API, Scripted REST APIs & Audit Logging Tools	Allows external systems to securely query records while enforcing field-level ACL rules and logging security audit trails.
