Project Title	Script_ Controlled ACL _ Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to enhance ServiceNow data security and access governance by implementing script-controlled Access Control Lists (ACLs). It addresses security vulnerabilities where static role-based security is insufficient, preventing unauthorized edits, data tampering, and compliance violations based on dynamic record field values.

Project Overview	
Objective	The primary objective is to dynamically restrict record write and delete permissions in ServiceNow based on specific field values (e.g., State = Closed) using server-side Scripted Access Control Lists (ACLs).
Scope	The project encompasses defining, testing, and deploying script-controlled ACL rules across key IT Service Management (ITSM) tables (Incidents, Change Requests, Tasks) to ensure complete data integrity across both UI and REST API channels.
Problem Statement	
Description	Static role-based security allows users with write roles to modify records even when they are in locked or finalized states. Frontend UI policies can be easily bypassed via direct REST API requests or URL access.
Impact	Eliminating these security vulnerabilities ensures strict compliance with auditing standards (GDPR, HIPAA, ISO27001), prevents accidental or unauthorized historical data alterations, and protects operational records.
Proposed Solution	
Approach	Implement server-side Script-Controlled ACL rules executing JavaScript condition evaluation (<code>`answer = current.state != 'Closed';`</code>) that evaluates in real-time before granting record write access.
Key Features	• Dynamic Server-Side Security Evaluation. • Seamless Enforcement Across UI, Service Portal, and REST APIs. • Zero impact on baseline database performance (< 10ms execution delay). • Real-time restriction based on field value transitions.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware Computing Resources	Cloud Server Instance	ServiceNow PDI / Enterprise Instance
	Memory	System RAM
	Storage	Cloud Database Storage
Software Platform / IDE	ServiceNow Platform	Washington / Xanadu Release
Languages	Server-Side Scripting	JavaScript (ECMAScript 2021 / GlideRecord API)
Development Tools	Testing & APIs	ServiceNow Studio, Postman API Client
Data	System Tables & Sample Records	Incident (`incident`), Task (`task`), Custom Tables
